through automation

3,000

students/semester
by 2030

We would never have engaged in that ambitious plan if we could not automate our processes... The technology and the tools allow us to have the ambition.

Nabil Mouline
President, JerseySTEM

Challenge

JerseySTEM was spending limited volunteer time on continuous onboarding and training for new team members. As an organization that relied on a 100% volunteer workforce, they needed to figure out how to re-focus on their core mission through automation.

Solution

JerseySTEM operates through a workforce of 80 to 100 volunteers and has a 0% payroll budget. JerseySTEM deployed 11 automations across various functions to connect over 20 SaaS tools for managing their operations, including end-to-end volunteer recruitment, outreach, onboarding, work management, and data management. These automations streamline job posting propagation to recruitment platforms, maintain job posting freshness, conduct outreach, onboard new team members, and handle task coordination. By automating their operations, the JerseySTEM team is able to prioritize program delivery.

Outcome

By automating their business operations, JerseySTEM saves 3900+ hours of manual labor, equivalent to \$135,000 that they can allocate towards program delivery. Automation Anywhere has streamlined operations, saving time, reducing errors, and optimizing resources across Human Resources and outreach functions. Automated workflows have replaced repetitive manual tasks, improving accuracy and freeing teams to focus on strategic priorities. With Automation Anywhere, JerseySTEM has digitally transformed their operations so their 100%-volunteer team can focus on their core mission: educating girls throughout New Jersey in STEM education. The automation infrastructure is designed to scale with JerseySTEM as they expand their impact, with a goal of reaching 3,000 students per semester.
