

What Real Users Are Saying About Automation Anywhere Versus Alternative Solutions

Gajanan S.
Software Engineer at OMFYS
Technologies India Pvt.Ltd

“Before using Automation Anywhere I checked Blue Prism & Ui Path but I preferred Automation Anywhere because it is best in quality. It also has IQ Bot for unstructured data converting in structure.”

Sunilkumar V.
Head of RPA Team at
Olam International

“We compared Automation Anywhere with UiPath, Blue Prism, OpenSpan, and WorkFusion. Automation Anywhere is one of the easiest tools that developers can use for development. It takes them only a small amount of time. It has good stability in terms of implementing the automation use cases. We also found Automation Anywhere as a pioneer in terms of RPA implementation.”

Christian P.
Executive Tech
Manager at Inter

“When we implemented it, Automation Anywhere was already a widely used and popular tool. It has high availability, which is one requirement for a banking solution. It’s also easy to learn, use, and implement. We looked at the leaders in Gartner’s, such as Blue Prism and UiPath. Automation Anywhere stood out for its development interface.”

What Real Users Are Saying About Automation Anywhere Versus Alternative Solutions

Logeshbabu J.
Head Transformer at FLSmith

“We had looked at a lot of prominent players in the market and examined the different options as well, like Blue Prism and UiPath. Automation Anywhere was the one company who was flexible in terms of offering a PoC. We find this very comfortable. They were very approachable and aggressive, in terms of getting things done. This helped us make a decision in favor of Automation Anywhere. Also, Blue Prism doesn't have the functionality with attended automation that we would like to have.”

Prashant M.
Business Head of Intelligent Automation at CRG Solutions

“Automation Anywhere is the only RPA tool that is developed using something other than .NET technology. If you go for UiPath, Blue Prism, AutomationEdge, or Pega, they are all built on .NET, and only support Windows. But Automation Anywhere is developed on Java and Python entirely, and is totally web-based. Other tools are desktop-based. That means I can install their server on Linux too. Most banks and many other enterprise organizations require servers on Linux, not Windows. That's an advantage for Automation Anywhere.”

Shardul V.
Sales Director at Tecnoprism

“I have worked on UiPath, Blue Prism, and a couple of projects on Power Automate as well. The number-one advantage of Automation Anywhere is ease of use. Number two is the success stories. Number three is that it is a mature overall ecosystem.”

What Real Users Are Saying About Automation Anywhere Versus Alternative Solutions

BPM Analyst
at a financial services firm with
1,001-5,000 employees

“We looked at Blue Prism and UiPath, but we felt that Automation Anywhere was a good mix of both the front-end and back-end, whereas UiPath seems very front-end only and Blue Prism is very back-end only. We needed a mix for what we wanted to do.”

Rahul S.
Director at a manufacturing
company with 1,001-5,000
employees

“We looked at Blue Prism, UiPath, and Automation Anywhere. The reason that we chose Automation Anywhere was its ease-of-use and some of its market capabilities. We were also familiar with the tool from an outsource service provider.”

Senior IT Design Analyst
at a retailer with 1,001-
5,000 employees

“It is pretty easy to use. Personally, I do a lot of development, so I like the line-by-line code versus some of the other solutions, like Blue Prism or UiPath, which have a more drag and drop workflow.”

Deepinka S.
Developer at a manufacturing
company with 10,001+ employees

“We also evaluated UiPath and Blue Prism. We chose Automation Anywhere because of how well it suited our office. Automation Anywhere is easier to use. With drag and drop, we don't need the uploading skills, etc. Everything is just there. You can just drag and drop, then just go ahead and do it. With UiPath, it was a little difficult to understand the process. Also Automation Anywhere has email automation.”
